1 Bidding platform for freelancers

1.1 Context

A lot of people have tasks that they would like to perform but either they are too busy or too lazy to do them. The goal of this project is to create a platform where people can submit tasks or projects they want and how much they are willing to pay for it.

Other people can bid on how much they are willing to be paid to perform that task, then the person who posts the task is going to choose a person from the people who bid and that person is going to do the task.

1.2 Purpose

Enable people to outsource their tasks, chores or projects.

1.3 Business value

People who post the project could get a cheaper option since there is competition, and people who have the time and skills are able to make some money, and as a hosting platform we charge a fee for posting the job and a service fee for every transaction.

2 Activity Finder

2.1 Context

Used for when someone doesn't know what to do or what's nearby when they're bored. Home alone and want to get out of the house or simply out of plans for a hang out with friends.

2.2 Purpose

Uses maps to locate nearby area for fun attractions such as rock climbing or arcades. Can be filtered for specific interests.

2.3 Business value

Companies found through the application would pay a fee to post content or activities in the app. Enables users to purchase items or promotions from businesses through the app.

3 Courier Service App

3.1 Context

You have a small package that you want to send to someone, whether it be your friend's jacket you borrowed or documents that your coworker needs to get. However, you are too busy or cannot be bothered to deliver these items personally.

That is when you request a courier service in your area to deliver these items at a proportional rate to the distance the package must travel, within reason.

3.2 Purpose

Enable people to send packages without the need to fill out a form, wait inline or go to a specific place to send a package nearby.

3.3 Business value

We outsource the labor to available individuals who want to make extra money and the platform collects a percentage of the rate for each transaction.
